

MBA

Financial Engineering

With financial markets going global, the number of products that require state-of-the-art knowledge of financial tools is growing rapidly.

To work effectively in a corporate setting, or in banking or consulting, you need an in-depth understanding of financial risks. This means knowing how to make the best use of all of the tools and techniques available, and combining those with expert-level knowledge of the finance sector. ISC Paris gets you there: all of the Financial Engineering MBA courses are taught in English, since fluency in English is absolutely required for anyone who wants to work in this sector.

The ISC Paris MBA in Financial Engineering brings together three complementary areas of study: corporate finance, market finance, and financial engineering. The program helps you build expert-level skills in all of these areas. Our graduates are unique in their knowledge of the technical complexities of the finance world; in corporate environments, they are known for their ability to handle complex issues while adding a high level of value.

Most graduates of this program go on to management roles. The program encourages students to develop cross-disciplinary skills in addition to skills specific to financial engineering.

PERSPECTIVES
